Breast Cancer

HEDIZ TANJONA R XAVIER T

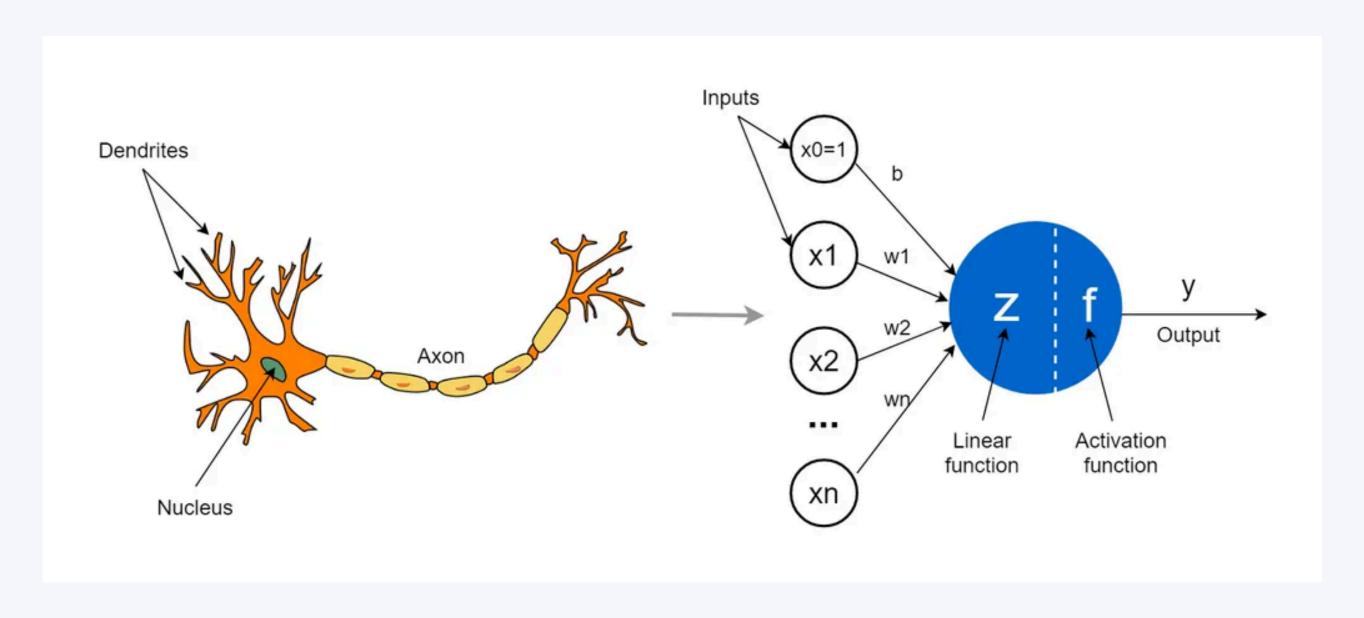

Sommaire

- 1. Présentation du perceptron
- 2. Présentation des données
- 3. Sélection des variables
- 4. Modèle de perceptron et prédiction

Modèle de perceptron

En 2023, environ 61214 nouveaux cas de cancer du sein ont été diagnostiqués chez les femmes, marquant une augmentation annuelle de 0,3 %.

En 2021, le cancer du sein a causé environ 12600 décès féminins, avec une diminution annuelle de 1,3%.

Présentation des données

Forme et Taille

radius_mean : Rayon moyen des cellules.

perimeter_mean : Périmètre moyen.

area_mean : Aire moyenne.

Texture et Symétrie

texture_mean : Variabilité des teintes dans l'image des cellules.

smoothness_mean : Régularité des contours.

symmetry_mean : Degré de symétrie des cellules.

fractal_dimension_mean : Mesure de la complexité des contour

Compactité et Concavité

compactness_mean : Compacité de la cellule

concavity_mean : Gravité des concavités dans le contour.

concave_points_mean : Nombre de points concaves dans le contour.

Les erreurs standard: radius_se, smoothness_se Régions malades: radius_worst, texture_worst

Piste d'amélioration

- Augmenter la taille des données.
- Améliorer leur qualité en évitant le data leak.
- Explorer la piste des réseaux de neurones pour acquérir un modèle plus complexe et précis
